

Solutions for the *Original I.Q. Tester*

Begin by numbering the holes as illustrated to the right. Each move consists of two numbers. The first number is the peg which is to be moved and the second number is the hole in which the peg is to be moved. Remember to remove the peg which is jumped.

12 of the 179,124 solutions for leaving the last peg in the hole initially left empty:
(there are no such solutions where hole 5, 8 or 9 is initially left empty)
